

BUSINESS IDEA SUBMISSION

HealthPod BD

Smart, Self-Service Health Check Booths for Bangladesh

Course: Business Law — LAW 4151 / 2106

Trimester: Summer 2026

Group: Next Venture

Section B

“Making basic health checks easier to access, one booth at a time.”

1. Business Idea: HealthPod BD

HealthPod BD is a proposed network of automated, self-service health-check booths designed for busy public places in Bangladesh. The booths would let people quickly check basic health indicators such as blood pressure, blood glucose and blood oxygen level (SpO₂) without needing to visit a clinic just for a routine check.

2. The Problem

- Many people in Dhaka are busy and may ignore basic health checks unless they already feel unwell.
- Getting a simple measurement can mean waiting at a clinic, pharmacy or diagnostic centre.
- Students, office workers, shoppers and commuters often spend several hours outside home but have limited access to convenient health-monitoring facilities.

3. How HealthPod BD Would Work

Step 1 — Check in: The user starts the booth and follows simple on-screen instructions.

Step 2 — Take measurements: Built-in devices measure blood pressure, blood glucose and SpO₂.

Step 3 — Get a clear report: The booth shows the readings and provides a simple explanation of what they may indicate.

Step 4 — Guidance: An AI-assisted system can provide general triage guidance, such as whether the user should monitor the result, consult a doctor, or seek urgent medical attention.

4. Target Customers and Locations

Primary users: students, office workers, commuters, shoppers, older adults and people who regularly monitor their health.

Possible locations: shopping malls, universities, metro stations, large office areas, transport hubs and other high-footfall public spaces.

5. Revenue Model

The main revenue source would be a small fee for each health check. HealthPod BD could also earn through monthly membership packages, partnerships with hospitals or diagnostic centres, and corporate wellness programs for offices and universities.

6. Why This Idea Is Different

The focus is not on replacing doctors or clinics. Instead, HealthPod BD would fill the gap between “I want to check my health” and “I need to visit a healthcare professional.” Its main advantage would be convenience, quick access and easy-to-understand guidance in places people already visit.

SUBMISSION DETAILS

Business Law — Summer 2026

Particular	Information
Course	Business Law
Course Code	LAW 4151 / 2106
Semester	Summer 2026
Group Name	Next Venture
Section	B
Business Idea	HealthPod BD

Team Members:

No.	Name	Student ID
1	Shifa Akter Mim	111221166
2	Asif Hossain	111221086
3	Tanzir Ahsan Shakib	1112230189
4	Md. Nahidul Islam	1112230203
